

TEACHING HIGH THREAT
TACTICAL MEDICINE TO
MINIMIZE MORTALITY

ADVANCED TACTICAL PROVIDER

Course Offering:

TACTICAL EMERGENCY CASUALTY CARE: (16 hours)

TECC is a set of best practice treatment guidelines for trauma care in the high-threat prehospital environment. These guidelines are built upon critical lessons learned by US and allied military forces over the past 15 years of conflict. They are appropriately modified to address the specific needs of civilian populations and civilian First Responders. This includes pediatric, geriatric, and special needs patients as well as considerations for underlying medical conditions common in a civilian population, and limitations of civilian EMS and the varied types of threats that all First Responders face.
